## Use of the TFPI Software

A program has been written in Microsoft QuickBASIC to implement the traffic models developed for both rural and urban Indiana state highway segments during a two-phase HPR Project carried out for the Indiana Department of Transportation. The report "TRAFFIC VOLUME FORECASTING METHODS FOR RURAL STATE HIGHWAYS" describes the models developed in Phase 1 of the study, while the report "THE DEVELOPMENT OF A PROCEDURE TO FORECAST TRAFFIC VOLUMES ON URBAN SEGMENTS OF THE STATE AND INTERSTATE HIGHWAY SYSTEMS" describes the models developed in Phase 2. For rural interstates, new models have been developed in Phase 2 that supercede the Phase 1 rural interstate model. These models have been implemented in the Phase 2 software.

The microcomputer software package TFPI (Traffic Forecasting Procedure for Indiana) enables the user to easily generate forecasts of traffic volumes on state highway segments in Indiana. At each step in the program, easy-to-follow instructions appear on the screen. The program package is screen-oriented, that is, it presents a series of clearly-structured data input queries that invite the user to supply logical and generally available data needed to forecast traffic.

The executable version of the program (file TFPI.EXE), along with the files called "BRUN3087.EXE" and "INITIAL.EXE", should be present in a directory reserved for TFPI. (In the example below, we have created a directory named TRAFFIC on the C drive.) To start the program, the user needs only to type **TFPI** from this resident directory. In our example,

```
C:TRAFFIC>TFPI<Hit RETURN Key>
```

If any problems arise outside the TFPI environment, typing "control C" should return you to a DOS prompt.

In the very first part of the TFPI program, the user is asked to choose an output medium (printer or file or both). The program will then ask for a general description of the project site, to determine the model(s) needed and to generate the output. Answers to Questions 1 through 7 (Q1 - Q7) are optional, but are very useful in labeling the case being studied in the output to be generated. Answers to Q8 - Q11 are used to select the model(s) appropriate for the project site. In the last part of the input session, the user is asked to supply the input variable values needed by the model(s). The program displays the sources of most of the information needed, as well as guidance on the valid range of values. Although the instructions provided by the program are easy to follow, the following information is provided to give the user some additional assistance.

1. Depending on the model(s) that the program will apply for a specific project site, one or more of the questions Q15 through Q36 will be asked of the user. The numerical values for the socioeconomic variables can be found in the appendices of this User's Manual:
  - a. Appendix A: City Population (16 pages)
  - b. Appendix B: County and State Population (12 pages)
  - c. Appendix C: County and State Households (8 pages)
  - d. Appendix D: County and State Vehicle Registration (12 pages)
  - e. Appendix E: County and State Employment (8 pages)
  - f. Appendix F: County and State Per Capita Income, 1982\$ (8 pages)

A worksheet file in LOTUS 1-2-3 format for each of the six databases in these appendices has been provided to INDOT. Because of their size, and because the particular data needed by non-INDOT users will probably be easily obtainable by those users, hard copies of these appendices have been provided only to INDOT. In Appendices E and F, data for the years 1980-1983 were drawn from sources different than the rest of the data, and are not entirely compatible. We suggest that use of these data as input be avoided whenever possible.

2. To determine the city or town that has most impact on the traffic at the project site, professional judgment needs to be exercised. In case of multiple towns and cities having an impact, add together the input variables for these influential cities and towns. The recommended response to optional question Q1 (*City Number*) can be found in Appendix A.
3. The county in which the project site is located generally determines the county. However, professional judgment can be applied in a case where a user feels that an adjacent county has an impact on the traffic growth at the site. (For example, a project site may be located close to a county boundary. The user may choose to use the *sum* of the variable values for the two adjacent counties. Of course, summed values must be used for both the base and forecast years.)

Suggested answers to optional question Q3 (*County Number*) can be found in Appendices B through F of this User's Manual.

4. The user should consult the INDOT publication "Traffic Statistics" if the official INDOT Highway Section Number is desired for optional input Q6. For the Geographical Region (Q9), see Figure 4.2 of the main report.

Some limitations of the study need to be understood by the user of the model. The models to forecast traffic on *noninterstate* urban state highways are applicable for city sizes less than 50,000 in population. For example, if the user tries to forecast traffic on an urban state highway with a city of 55,000 population, the program will terminate that run and will send the user back to the previous DOS prompt. The *interstate* models, however, are applicable to all interstate segments (both rural and urban) in Indiana, regardless of populations in the vicinity. The models are only applicable for the main segments of state highways and are not intended to forecast the turning movements from and to state highways.

At the end of the TFPI program, the program will ask if another run is desired. If the user's answer is "yes", then the program will start again. If the answer is "no" or if there was an execution problem during any point of the run, then TFPI will go back to the DOS environment with the addresses and telephone numbers of persons to contact.

If any question arises regarding the use of TFPI or the wording of this User's Manual, please contact Dr. Saha or Prof. Fricker (see front page).

(Note: The April 23, 1991 version of TFPI refers to Appendices in the "Implementation Report". This should actually read "User's Manual". This misnomer will be corrected in the next version of TFPI.)
